

Rasterising circles

1. To count the number of pixels in a circle:

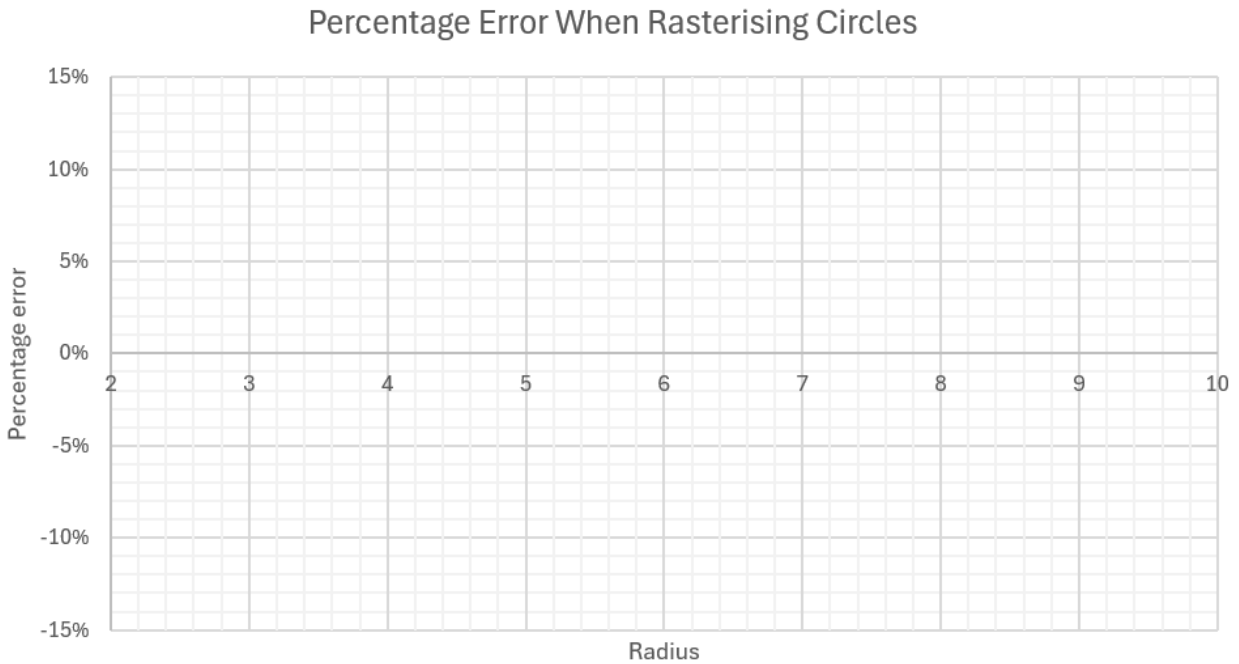

- a. Add the line `count = 0` at the start of the program.
- b. Add the line `count += 1` after the line which says `plot(x, y)`
You need to make sure it is indented from the left the same amount.
- c. Add the line `print(count)` at the very end of your program.

Make sure you choose the **text display** to see the printed answer.

2. Put your data into this table:

Radius	Number Of Pixels	Ideal Area	Percentage Error
3			
3.5			
4			
4.5			
5			
5.5			
6			
7			
8			
9			

3. Plot a graph of your data on this grid:

4. What happens as the radius increases? Can you explain why?
